

Walkaround Inspection

For Heavy Equipment Intellia Training Packs

Extend training capabilities with unparalleled pedagogy for safer operations.

The practice of walkaround inspection is a fundamental component in developing safe, skilled operators. CM Labs' Walkaround Inspection helps trainees master meticulous inspection and build expertise in equipment maintenance. This unparalleled operator training offers inspections that aren't just a checklist, but a guided learning and benchmarking tool.

Backhoe

Dozer

Tracked Excavator

Wheel Loader

Benefits

Improve Training Results

Guided Learning: Beyond a simple checklist, Walkaround Inspection offers tips and educational information provided at inspection points—highlighting what to look for and common issues encountered with real equipment.

Engaged Learning: Mirroring the real world, randomized faults teach operators to identify equipment malfunctions effectively. Coupled with a comprehensive checklist, Walkaround Inspection ensures that operators are well prepared for their daily inspections.

Fast & Sustainable Training

Quickly Transition Between Equipment Checks: Transitioning between inspection pre-use checks is designed to be quick and seamless, allowing organizations to minimize downtime and maximize learning.

Reduce Equipment Wear & Tear:

While building positive habits for pre-use inspections, reduce the need for physical equipment and offsite training. Save costs with preventative maintenance when operators spot malfunctions early through inspections.

Raise Instructor Capabilities

Benchmarking: Walkaround Inspection training serves as a sophisticated learning and benchmarking tool. Objective scoring allows companies to measure technical improvement and incident prevention across their organization.

Autonomous Learning:

Trainees can complete lessons independently at their own pace or under the supervision of an instructor.

Available with Intellia Backhoe, Dozer, Tracked Excavator, and Wheel Loader Training Packs.
