

# CM Labs Edge Plus

Affordable engineering-grade simulation training for the entire classroom

## Introducing CM Labs Edge Plus

Designed for maximum portability and simple setup, the desktop CM Labs Edge Plus simulator makes it easy and affordable for organizations to run CM Labs' full catalog of construction, utilities, and forestry equipment training packs anytime, anywhere. It is the ideal training solution for the classroom or on-the-go training, functioning as an optimal hands-on tool for attracting talent at job fairs and career development events. The CM Labs Edge Plus offers the same ultra-realistic engine and authentic machine interaction that is embedded in all our simulators, for high-quality simulation training in an affordable, smaller package.

## Benefits

### Quickly set it up anywhere

The CM Labs Edge Plus is so compact that it can easily be transported and installed in classrooms or at job fairs and tradeshow in minutes. All components, from the configurable pedals to the high-definition display, can be ergonomically positioned for optimal trainee comfort.

### Built to last

Featuring sturdy components, minimally exposed wires, and robust controls developed by OEM suppliers, the Edge Plus is built to last. This simulator is designed to provide 24/7 operations to classrooms for years of learning.

### Ready for any training pack

Instructors can run any Intellia equipment training pack from the Edge Plus for a full fleet of training. Controls and pedals can be adapted and configured accordingly.

CM Labs simulators bridge the learning gap between the classroom and the worksite.

# Meet the Edge Plus

## 1. An immersive display

With a single display, trainees have the views they need to develop worksite awareness. Laptop controls allow students to change their point of view and switch between “follow the hook” mode and “fixed camera” mode.

## 2. An easy-to-use interface

The laptop interface makes it easy for trainees to log in and switch between training exercises. In addition, the laptop also acts as the equipment computer interface, including safe load indicator (LMI/SLI), auxiliary controls, and operator dashboard.

## 3. A rugged laptop

The CM Labs Edge Plus is powered by a robust laptop for easy transport and unparalleled versatility.

## 4. Authentic, quality controls

Pedals, steering wheels, and joystick controls come from the same manufacturers that provide controls for real cranes and heavy equipment. As a result, they feel and operate just like the real thing.

## 5. Complete compatibility

Instructors can connect the CM Labs Edge Plus to other CM Labs simulators for crew training exercises, as well as connect it to Intellia training management tools for easy student monitoring and lesson planning.

## 6. Excellent customer support

The Edge Plus is backed by CM Labs' complete customer service and best-in-class maintenance and support plan, so your investment is always protected.
