

Virtual Operator Training Solutions

Equip your operators with the skills for safe, efficient equipment use. CM Labs' authentic simulation technology allows trainees to practice real-world operations safely, with key performance metrics logged throughout training.

Our simulator systems are essential for teaching safe and productive machine use, handling both routine and unexpected scenarios. With versatile controls and

configurations, you can seamlessly run a variety of training packs, each offering self-guided, progressive learning and top-tier simulation.

Select from a range of industry-leading training tools designed for every budget

Build Safer Operators

Trainees can practice challenging operations in situations that are impossible to replicate in real life without risk of injury or damage to equipment. Prepare them to respond to the unexpected by injecting system faults, load shifting, and inclement weather.

Reduce Training Costs

Reduce the time you need to spend on real equipment. For what you'd spend on a single crane or machine, you can deploy a fleet of simulators with lower maintenance and fuel costs, as well as a reduced carbon footprint.

Train Faster

Get concentrated seat time and greatly reduce 1-on-1 training hours. With an engaging learning experience, trainees acquire valuable skills even when the real equipment is unavailable.

Apprentices thrive with hands-on training. With CM Labs' simulators, they are learning faster, and the program is turning out better-qualified operators than ever before.
