

SPC Simulator Training Pack

Simulated equipment specs

Capacity: 55 tons
Slewing: 360°

Max work radius: 28m
Min work radius: 4m

Overview /

CM Labs' Ship Pedestal Crane (SPC) Simulator Training Pack can run on any Vortex port equipment simulator, and helps operators acquire critical skills such as learning to "catch the swing" with different types of attachments, land the spreader, and use cell guides to load containers.

Key features & benefits /

CM Labs' SPC Simulator Training Pack is a complete learning solution. It replicates the challenges of operating in realistic conditions, within a safe and controlled environment. This allows trainees to acquire operational skills that transfer to the real world, without fear of real-world repercussions.

A progressive learning program

covering weeks of operator training, ranging from controls familiarization to handling bulk, breakbulk, containers, and more.

Performance metrics and reporting

that provide trainers with real-time feedback on operator aptitudes and habits, along with overall scoring.

Best-of-class crane, cable, and lifting simulation

that ensures trainees understand how the crane works and what is required for efficient operations.

Smart Training Technology /

Port terminal operator training is often constrained by operational requirements, but the SPC Simulator Training Pack provides effective training at any time. It delivers the most transferable operator skills anywhere, outside the real equipment — like all CM Labs training solutions. That's because they are the only solutions on the market to incorporate CM Labs' Smart Training Technology™.

Smart Training Technology is comprised of CM Labs' proprietary and patented algorithms. Built on a high-fidelity real-time physics engine, it includes a mechanical engineering layer with multi-body constraints, transmission, cables, and other real-time simulation features that are unique on the market. This results in training that's based on real data and real machines.

The simulated SPC can be also customised to match the characteristics of your existing quayside equipment, including joystick deadbands, flipper behaviour, and hoisting, luffing, and slewing speeds.

The SPC Simulator Training Pack comes with a variety of unique operator assessment tools, including the real-time Load Path Graph, which provides a visual indicator of load trajectory while the trainee is operating the simulator. This powerful tool allows instructors to provide immediate feedback to novice operators during training sessions, and correct any inefficiency before it becomes a habit.

The training solution also generates a real-time Hook Block Map, for a visual representation of load pendulums and all other deviations of hoist lines from the vertical. This helps trainees intuitively develop a rapid understanding of the movements required for load control.

Supported Simulator Hardware Platforms

The SPC Simulator Training Pack can be installed on any Vortex simulator hardware platform, with different configurations to meet your budget, space, and training requirements. Designed for years of 24/7 operator training, Vortex simulators are built to last.

Vortex Trainer: Entry-level desktop training

Vortex Advantage: Versatile training station

Vortex Master: Complete trainee immersion

Learning program

With a focus that goes far beyond basic controls familiarisation, the SPC Simulator Training Pack exposes operators to conditions that are challenging or unsafe to replicate outside the simulator, including sea swell, fog, snag loads, and mechanical failures.

Exercises include:

- ✓ Controls familiarization
- ✓ Efficient loading and unloading of containers (twin-20ft, 40ft, and 45ft)
- ✓ Handling pipes, coils, bags, rebar, and steel plates
- ✓ Lifting forklifts and hatch covers

Trainers can also use the optional Instructor Operating Station to create unlimited custom exercises, trigger unexpected events, and generate Load Path Graph and the Hook Block Map reports.

Performance measurement

The SPC Simulator Training Pack gives trainers objective insight into trainee performance and abilities. Instructors can access key performance metrics in real time, such as:

- ✓ Cycle time
- ✓ Spilled material
- ✓ Number of collisions
- ✓ Unsafe operations
- ✓ Aggressive landings
- ✓ ... and more

Instructors can also generate reports based on customizable scoring parameters, and review against benchmarks or past training sessions.
