

Liebherr Selects Vortex for Offshore and Port Crane Simulator

November 23, 2010

We are proud that one of the world's most respected crane manufacturers has selected Vortex for a new simulator project for both offshore and harbor cranes. Liebherr is a well known trendsetter in new technologies and innovations.

The simulator will be used to showcase Liebherr's advanced Litronic controls systems and crane operations while immersed in an actual Liebherr crane cabin. The simulator will be showcased at Liebherr tradeshow events in 2011.

The simulator is built on the Vortex engine and integrated with Liebherr Litronic controls. It provides a very high level of realism and a true operations in-cab experience.
